Employment History

Senior Programmer/Analyst
The Boeing Company, Seattle
April 1989 – June 2020

- Developed and tested Oracle database-based data warehousing environments, ensuring efficiency and minimal downtime using PL/SQL and Toad for Oracle.
- Led data warehousing projects from ETL coding to application development for supplier quality data and configuration management of workstations.
- Spearheaded the porting of business applications to AIX workstations, including legacy code conversion and Perl utility development.
- Managed data migration and synchronization projects involving CATIA V4, DB2, and ENOVIA product data manager, including script automation in Autosys.
- Developed UI enhancements and database integrations for CATIA V3 and V4 using Fortran, PL/I, and C in various environments.
- Designed and developed J2EE applications for IBM WebSphere servers.

Education

Associates Degree in Information Systems: Software Development Track
Bellevue Community College, Bellevue, Washington
January 2021 – June 2022
